**(54) SEALED STORAGE
BATTERY HAVING
ALUMINUM TERMINAL**

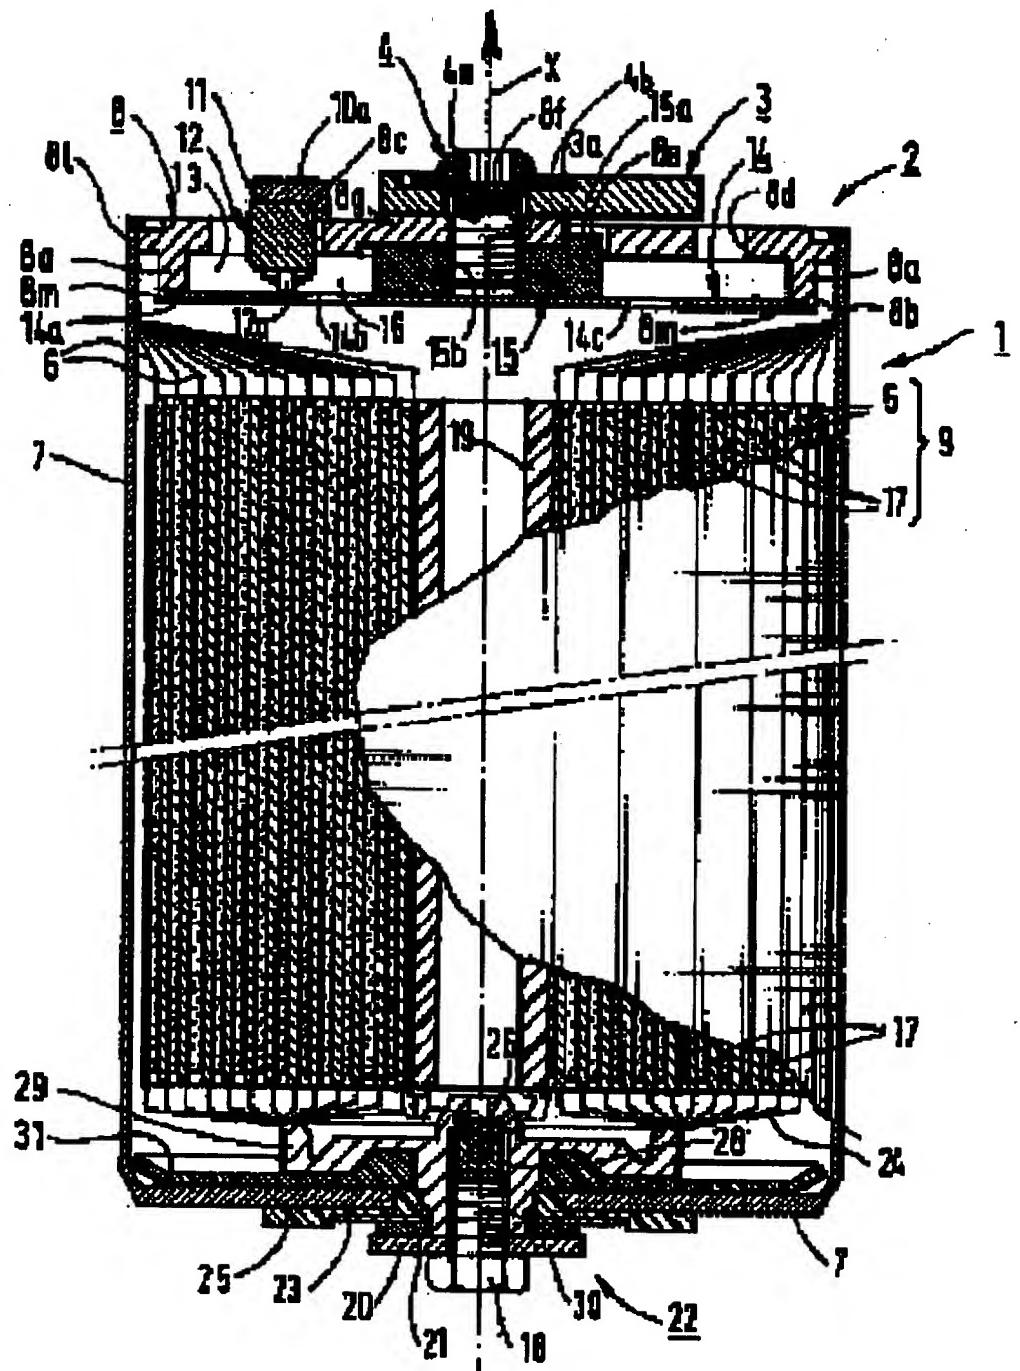

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a reliable sealed high-capacity storage battery having a substantially cylindrical container, two terminals at two end parts of the substantially cylindrical container, one terminal being small, and high efficiency over the service life period of the battery, including a current collecting device formed of aluminum.

SOLUTION: This cylindrical high-capacity sealed storage battery 1 has a terminal containing aluminum in one end part 2. At least a part of the one end part 2 is located under a cover 8 and is provided with an aluminum cover formed so as to be abutted on an external electric connection component 3 of the battery by a clamp means 15 in cooperation with an outside assembly means 4. The clamp means is formed of a material selected from a group

comprising stainless steel, nickel-plated steel, copper or brass, and the cover of the battery is sealed by a metal sealing cap 14 located under the cover.
